

Displaying page layout variables

Kent McPherson a.o.*

1 Introduction

This LaTeX_{2 ϵ} package is a reimplementation of `layout.sty` by Kent McPherson. It defines the command `\layout` which produces an overview of the layout of the current document. The command `\layout*` recomputes the values it uses to produce the overview.

The figure on the next page shows the output of the `\layout` command for this document.
